

*Ecologically Beautiful
Spectacular Savings*

X-SERIESTM

*You are looking at what may be the world's most energy efficient pool pump. An X-Series pump uses on average only 10% to 20% of the energy a typical pool pump would require. The result is a **savings of \$60-\$120** off your electric bill **every month**.*

Not only will your wallet benefit from the energy savings but so will your pool. With the reduced energy cost, you can now run your filtration system for longer periods of time resulting in cleaner, healthier water.

If you have been thinking about installing solar electric, an X-Series pump provides comparable energy saving benefits, at around 10% of the cost of rebated solar.

Simply put, when you replace your single or two speed pool pump with an X-Series pump, it's essentially equal to turning off 16 to 24 lights in your home everyday. Unlike solar that has an 8 to 12 year return on your investment, an X-Series pump can pay for itself in as little as 6 to 10 months.

Going green and saving energy has never been so easy or cost so little.
